PRELIMINARY AMENDMENT

Prior to examination, please amend the application as follows:

In the claims:

Amend claim 46 and 47 as follows:

--46. A method of detecting an interaction between a composition and a biological moiety comprising:

providing a composition capable of a characteristic spectral emission, the composition comprising a compound; a semiconductor nanocrystal associated with the compound; and

allowing a sample comprising a biological moiety to interact with the composition; and

detecting the interaction of the biological moiety by monitoring the spectral emission of the composition.--

--47. The method of claim 46, wherein monitoring the spectral emission occurs in assays selected from the group consisting of: immunochemistry, immunocytochemistry, immunobiology, immunofluorescence, DNA sequence analysis, fluorescence resonance energy transfer, flow cytometry, fluorescence activated cell sorting, diagnostics in biological systems, and high-throughput screening.--

Add claims 49-95 as follows:
